SUMMARY

Software engineer with 3+ years building financial software in TypeScript, React, Node.js, Java, and PostgreSQL. I own reporting used by thousands of dealership users at Reynolds & Reynolds and built Java billing services for tens of thousands of telecom customers at CGI. Master's in computer science.

SKILLS

Languages: Java, TypeScript, JavaScript (ES6+), Python, SQL

Frontend: React, Redux, HTML5, CSS3, JSP, Tailwind CSS, reusable component libraries

Backend & Distributed Systems: Spring Boot, Node.js, RESTful APIs, microservices, Apache Kafka, event-driven architecture, role-based access control

Data & Cloud: PostgreSQL, MySQL, Redis, query optimization, index tuning (HypoPG), AWS (EC2, S3), Docker, Terraform, Jenkins CI/CD

AI-Assisted Development: Claude Code (daily, with review of every generated change), GitHub Copilot, MCP server integrations

EXPERIENCE

- Reynolds & Reynolds** Aug 2025 - Present
Developer Dayton, USA
 - Own financial and forecast reporting across Sales, F&I, Service, and Parts used by thousands of dealership users at 300+ dealer groups, projecting profit and loss against current-month trends.
 - Cut Parts Locator search time by 10+ seconds through HypoPG index tuning, then added a monthly-refreshed Redis cache that brought the largest enterprise's load time under 5 seconds.
 - Migrated 2 legacy ColdFusion projects, store and enterprise versions of 8 reports including Service/Parts and Fixed Gross Profit, to React, TypeScript, and Node.js with zero data-integrity regressions.
 - Implement role-based permissions controlling report access for store- and enterprise-level administrators, and delivered front-end enhancements to the sign-up and email-authorization flow.
 - Ship 4+ pull requests per sprint alongside main project work and review teammates' code every sprint.
 - Resolved 6-7 high-priority production tickets, tracing root causes through logs and metrics.
- CGI** Oct 2020 - Dec 2022
Software Engineer Bangalore, India
 - Built Java and Spring Boot services for an end-to-end telecom billing system for a major Canadian provider, covering charges, usage, and payments for tens of thousands of customers.
 - Built Kafka event-driven integrations with retry handling, JSP/HTML pages, and REST/SOAP APIs over SQL stored procedures.
 - Refined data-processing algorithms, cutting billing processing time by 30%.
 - Led a Dockerized migration of services to AWS (EC2, S3) and built Jenkins CI/CD pipelines for automated build, test, and deployment.
- Dream Studio (Model Earth Project)** Feb 2025 - Aug 2025
Open-Source Contributor Remote, USA
 - Led development of the RealityStream model-generation pipeline in Python, integrating contributions from a distributed global team into one reliable application.
- University of Dayton** May 2023 - Dec 2024
Graduate Teaching Assistant, Deep Learning Dayton, USA
 - Mentored Deep Learning students and designed assignments, including a Q&A chatbot model trained and evaluated in class.

PROJECTS

- AI News Curator**
 - Built a full-stack news app (React, Spring Boot, Docker, AWS) using Hugging Face transformers for summarization, entity recognition, and keyword extraction, ranking articles with cosine similarity and LDA.

EDUCATION

- University of Dayton** Jan 2023 - Dec 2024
MS in Computer Science, 3.83 GPA Dayton, USA
- Keshav Memorial Institute of Technology** Aug 2016 - Sept 2020
B.Tech in Electronics and Communication Engineering Hyderabad, India
