Sai Tarun Sirapurapu

Software Engineer · Backend & Full-Stack (Java, TypeScript, PostgreSQL)
tarunsirapurapu@gmail.com · 937-329-2252 · linkedin.com/in/saitarunsirapurapu · github.com/tarungit98 · tarunsirapurapu.space

Summary

Software engineer with 3+ years building financial and billing software in Java, TypeScript, React, Node.js, and PostgreSQL. At Reynolds & Reynolds I own financial and forecast reporting used by thousands of dealership users across 300+ dealer groups, and I cut our slowest search by 10+ seconds. Looking for a backend or full-stack role on a team that builds data-heavy products.

Experience

Developer · Reynolds & Reynolds Aug 2025 – Present
Dealership financial reporting — Sales, F&I, Service, and Parts reports for 300+ dealer groups · Dayton, OH

- Own the financial and forecast reporting suite used by thousands of dealership users at 300+ dealer groups, projecting profit and loss from invoice, receivables, and payables data against current-month trends.
- Migrated 2 legacy ColdFusion projects (store and enterprise versions of 8 reports, including Service/Parts and Fixed Gross Profit) to React, TypeScript, and Node.js with zero data-integrity regressions.
- Resolved 6–7 high-priority production tickets by tracing root causes through logs and metrics; ship 4+ pull requests per sprint and review teammates' code every sprint.
- Cut Parts Locator search time by 10+ seconds by testing hypothetical PostgreSQL indexes with HypoPG before building them, then added a monthly-refreshed Redis cache that brought the largest enterprise's load time under 5 seconds.

Software Engineer · CGI Oct 2020 – Dec 2022
Telecom billing — charges, usage, and payments for a major Canadian provider · Bangalore, India

- Built Java and Spring Boot billing services, Kafka event-driven integrations with retry handling, and REST/SOAP APIs covering charges, usage, and payments for tens of thousands of customers.
- Cut billing processing time by 30% by refining the data-processing algorithms.
- Moved services to AWS (EC2, S3) as Docker containers and built Jenkins CI/CD pipelines for automated build, test, and deployment.

Projects & Open Source

AI News Curator github.com/tarungit98/newsAggregator-backend
Full-stack news app that summarizes articles and extracts entities and keywords with Hugging Face transformers, then ranks them with cosine similarity and LDA. React, Spring Boot, Docker, AWS.

RealityStream (Model Earth, open source) · Feb – Aug 2025 github.com/tarungit98/RealityStreamTarun
Led development of the Python model-generation pipeline, merging contributions from a distributed global team into one application.

Real-Time Robotic Object Detection
ROS 2 and YOLOv8 system that detects and classifies Mars rock samples from multi-camera input in real time.

Skills

Production: Java, Spring Boot, TypeScript, React, Node.js, PostgreSQL, SQL, Redis, Kafka, REST APIs, AWS (EC2, S3), Docker, Jenkins CI/CD

Comfortable with: Python, MySQL, Terraform, PyTorch, Tailwind CSS; Claude Code and GitHub Copilot daily

Education

MS, Computer Science — University of Dayton, 2024 · Graduate Teaching Assistant, Deep Learning

Bachelor of Technology, Electronics & Communication Engineering — KMIT, 2020
